Barcelona, Spain

A Front-end developer and designer with 2+ years experience. I have a clear understanding of web design with skills in creating web pages with HTML5, CSS3, Responsive web design and bootstrap 4. I also enjoy working with JavaScript and JS frameworks, such as Scriptaculous, Dojo and jQuery with some experience with version control system APIs (Github). I have worked as a Junior Quality Assurance Engineer for mobile and desktop applications. I am now looking for a position that fosters my interest in collaborating in the development department.

## Experience

### BeMobile

sept 2020 - Nov 2022

Madrid, Spain · Remote

- B2 level (Common European Framework of Reference for Language) in English
- HTML5, CSS3, JavaScript, jQuery, Responsive design, Version control/Git

## Tech Skills

### HTML5, CSS3, BOOTSTRAP FRAMEWORK

2 + years experience working with HTML5, CSS3 and Bootstrap 4. I like to work in my own code to create static web pages with HTML5 and CSS3 and give them a little bit of interactivity with advanced CSS3 like canvas and RWD (Responsive web design). I also like to work with Bootstrap 4 because of the creative opportunity you can find through HTML and CSS templates as well as JavaScript Plugins.

### JAVASCRIPT

1.5 years experience working with Javascript. I like to work in my own code using Javascript and complement it with HTML and CSS3.

### Interests and pursuits

**SQL**-I have recently started learning SQL (Structured Query Language) working with a *RDBMS* MySQL because I would like to deepen my knowledge about managing and organising data in databases.

**Python**-I am currently learning how to use Python in both Frontend and Backend programming projects. I find it particularly interesting as it is an incredibly versatile programming language.

**React JS**-I have a keen interest in studying ReactJS because I can make better web interfaces and it is a useful tool for building Single Page Applications (SPA).

**Sass/css** - I am completing a project using SASS and I am curious as to how variables, nested rules, mixins, imports can be used as features along with CSS.
